Profile

Results-driven Frontend Web Developer with **more than 2 years of experience in designing and developing responsive and user-centric interfaces using React and Angular**. Proficient in utilizing Bootstrap, Redux, and React Material-UI to create dynamic and visually appealing user interfaces tailored to client requirements. Demonstrated expertise **in integrating Power BI reports and Generative AI technologies into web applications** to enhance data visualization and user experience. Proven track record of successfully delivering high-quality solutions on time and within budget for clients across various domains, including government and insurance.

Experience

Tata Consultancy Services | Hyderabad   February 2022 - Present
Assistant System Engineer

Project 1 : Indian Govt

- Contributed to the Indian Govt portals project by developing multiple responsive user interfaces for the multiple use cases using **React, Redux, Bootstrap, and React Material UI components**. Successfully delivered these solutions, which are now operational and utilized by users across India.

- Regularly engaged in testing and actively participated in resolving issues for live servers, ensuring the ongoing functionality and performance of critical government portals.

Project 2 : Insurance customer

- Worked with an insurance domain client to **create responsive UIs using Redux, ReactJS, and React Material UI**. **Integrated a chat interface that utilizes GPT prompts** for user queries, including **auto-complete and auto-suggest features.**

- Implemented a GPT-based solution for **extracting data from PDF documents**, such as company policies, to provide responses with citations. Additionally, learned and developed a **user-friendly chat interface using Python's Streamlit technology**.

Project 3 : FMCG Customer

- Worked **with client to integrate Power BI reports into a React application** using ReactJS and Bootstrap. This integration significantly reduced the time required to develop dashboards and was successfully deployed on a remote server.

- Generated multiple reports and integrated them into the UI with save and edit modes as per client requirements. Successfully delivered these features, meeting client expectations and ensuring a functional and user-friendly experience.

Project 4 : Manufacturing Usecase

- Worked with **Generative AI technologies and integrated them into Angular applications**, developed over six use cases. Actively participated in Innovasta, where the solutions garnered significant panel attention. Successfully persuaded clients to incorporate these use cases into their web applications, demonstrating effective innovation and client engagement.

Project 5 : Telecom company

- Actively working on **UI development using the Angular framewor**k for the telecom client. **Integrated Power BI reports into the Angular application** and developed multiple UIs and **chat interfaces with GPT prompt** integration to enhance functionality.

- **Integrated multiple Power BI reports into React and Angular web applications** as per client requirements. This integration significantly reduced dashboard development time and increased efficiency, providing clients with streamlined data visualization solutions.

Skills

Technologies :

- Html
- Css
- Bootstrap
- Node JS

Languages :

- JavaScript
- TypeScript
- Python (Streamlit)

Tools :
GIT, Windows

Frame work and Libraries:

- React JS
- Angular JS
- Express JS

CERTIFICATIONS AND LINKS

GCP (Associate Cloud Engineer): Valid till march 2026
